Enabling Latent Human Capability through Games

Nathanael Ng

In Partial Fulfillment of the Requirements for the Degree  
Master of Science in Information Design & Technology  
School of Literature, Communication and Culture  
Ivan Allen College  
Georgia Institute of Technology  
April 2005

Committee:

Diane Gromala (Chair), Michael Mateas, Christopher Shaw

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## OVERVIEW

- Uplift: an artifact with two purposes
  - Game
  - Instrument
- Suitable for those purposes because of:
  - Compelling nature
  - Design features
  - Malleability

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## HISTORY

- ▣ “Flow” as a concept
  - ▣ Martial arts
  - ▣ Sports studies
  - ▣ Psychology (Csikszentmihalyi)
  - ▣ Digital games

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## CSIKSZENTMIHALYI'S CHARACTERISTICS OF FLOW

- ❖ Challenging but tractable task
- ❖ Opportunity for perfect concentration
- ❖ Clear goals
- ❖ Immediate feedback
- ❖ Full task-immersion
- ❖ Sensation of exercising control
- ❖ Loss of self-consciousness (as an effect of concentration and immersion)
- ❖ Transformation of time

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## ISSUES WITH FLOW RESEARCH (THE PROBLEM)

- ❖ Not easily identified
- ❖ Apparently subjective - primary instrument for measuring it IS the subject
- ❖ Needs objective metric in order to be admissible
- ❖ Hence the requirement for an instrument such as Uplift

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## CASE STUDIES

- Several case studies of prior work were done and the following was observed.
- Risk/reward systems tend to modulate the difficulty of a game. It is questionable whether the reward should offer the player some advantage.
- Significant difficulty scaling over a single game session can be inimical to the continuation of a flow state.
- Many, but not all, of the games observed demand extensive use of peripheral vision.

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## CASE STUDIES

- ❖ “Boss” encounters, whilst they increase dramatic tension, are often difficult to justify in terms of their impact on the player's mode of play.
- ❖ The requirement for memorization could potentially expand the task domain to positive effect.
- ❖ The “transformation of time” does not necessarily entail a long period of time in the flow state.
- ❖ It is possible to generate “flow-like” experiences independent of a game's interactive aspects.

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## FACTORS AND INFLUENCES

- ✦ The possibility of multiple levels of intention-action coupling
- ✦ Adrenaline-induced responses
- ✦ The impact of peripheral vision
- ✦ The problem of representation
- ✦ Transformation of time; duration in “retro” vs. modern games
- ✦ Non-realtime games; cognitive tasks

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## DESIGN

- ✦ FORMAT: 2D shooting game (“shmup”)
  - ✦ Affords a wide variety of representations and visual styles
  - ✦ Simplicity results in shorter development cycle
  - ✦ Established genre conventions
- ✦ INPUT DEVICE: Keyboard, as well as biofeedback option
  - ✦ High usability and familiarity; commonplace
  - ✦ Mouse input is not necessarily desirable

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## DESIGN

- ▶ STAGES AND GAME PROGRESSION
  - ▶ Standard level structure
  - ▶ Increasing power level
  - ▶ Power fluctuations create challenge
  - ▶ Extra lives allow extended play

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## DESIGN

- ✦ RISK/REWARD SYSTEM
  - ✦ Score multipliers for maintaining high power level
  - ✦ Score multipliers for close-in attacks
  - ✦ Pacifist mode

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## DESIGN

### ❖ OBSTACLES AND ADVERSARIES

- ❖ Three enemy types, representative of common categories of adversaries
- ❖ Boss encounters
- ❖ Enemy encounter frequency increases with level
- ❖ Point-based random template system
  - ❖ Template values are configurable

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## DESIGN

### ▣ BIOFEEDBACK

- ▣ Biofeedback implementation in this version is not 100% complete
- ▣ Speed and angle are variable parameters
- ▣ Future development could see the introduction of more parameters...
- ▣ ...and of neurofeedback systems.

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## DESIGN

- ❖ REPRESENTATIONAL PRACTICE, GAME SCHEMES, MUTABILITY
  - ❖ “Game schemes” used to package settings
  - ❖ As earlier noted, representation is difficult
  - ❖ Hence default schemes are mostly somewhat abstract
  - ❖ Game supports replacement of most game objects with wireframe or full-3D objects
  - ❖ Schemes can be created/edited in a text editor
  - ❖ Possibility of a “scheme editor” utility

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

## EVALUATION

- ❖ Small available sample size (interested individuals)
- ❖ Biofeedback readings did not always correlate with flow reports
- ❖ Intentional manipulation of player's biostate to gain game advantage
- ❖ Players experienced with other games made less use of biofeedback
- ❖ Volatile testing group

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## ISSUES

- ❖ Constraints of Java3D and developer's limited experience
- ❖ Gameplay could use more variety
- ❖ Difficulty needs slight balancing - consequence of randomness
- ❖ Question of one-sided task domain
- ❖ General evaluation: successful as a prototype

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## FUTURE WORK / POTENTIAL ENHANCEMENTS

- ▣ Neurofeedback
- ▣ Session recording, including recording of parameters
- ▣ Scripted sequences
- ▣ Sound or reverse synaesthesia
- ▣ Gameplay enhancements

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## CONCLUSION

- ✦ Increasing interest in this aspect of interactive media
- ✦ The pleasure of being challenged
- ✦ Growing awareness that big budgets and flashy visuals are often minimally relevant to interactivity
- ✦ 'Plateau' in visual capability may introduce a renewed focus on gameplay
- ✦ Re-democratization of game design: Flash and independent games

# UPLIFT

ENABLING LATENT HUMAN CAPABILITY THROUGH GAMING

---

## SPECIAL THANKS

- ❖ Code used: particle systems by A. Davison, 3D model loader by Trond Abusdal
- ❖ Independent developers and players everywhere
- ❖ Testers and interested persons in IDT and Tech
- ❖ IDT faculty, and in particular the committee
